

Battery electronic tester

YT-83113

It enables to test 12 V batteries in passenger cars, light commercial vehicles and motorcycles as well as to assess start-up system.

- intended for testing traditional lead-acid batteries (the so called wet-cell batteries), gel and AGM batteries
- additional functions of battery condition (percentage wear level) and state of charge (percentage battery rating) assessment
- CCA test scope: 200-1200
- legible LED display with brightness regulation
- power supply directly from vehicle installation due to which the device is always ready for operation
