

Moisture meter for wood and building materials

YT-73141

Designed for determining the humidity level of walls, as well as soft and hard wood. It enables easy and precise measurement due to the reference values adopted for different materials.

The hygrometer is often used to check the humidity of wood for fireplaces, smokehouses and ovens (the humidity of firewood should not exceed 20%).

- measurement to a depth up to 10 mm
- measurement accuracy: for building materials +/- 0.1%, for wood +/- 2.0%
- measurement range: wall 0.2-2.9%, wood 6-60%
- clear LCD display
- 3 diodes that additionally indicate the humidity level: green – low humidity, orange – medium, red – high
- temperature sensor operating in the range of 0-40°C (32-99°F)
- automatic deactivation function
- compact size
- power supply: 9 V battery (6F22)
- the set includes two spare electrodes
